

Sustainable Roofing & Waterproofing *Alliance*

Roof Monitoring & Warranty Incentive Program

Benefits to the Building Owner

Partnering with an affiliate of the Sustainable Roofing Alliance (SRWA) can ensure a top-quality installation, affording you with a long-lasting roofing system while giving you the additional benefit of a reduced warranty rate, warranty extension or a variety of other services available only through the SRWA program.

When considering the best possible roofing system for your building, there are a variety of aspects to consider – high-quality design and products, roof monitoring during the initial installation, routine inspections and maintenance and system warranties that will offer you long-term peace of mind. **In a world of escalating costs and increasing uncertainty, getting a sound return on your long-term roofing investment is critical. Carlisle Construction Materials recognizes this and offers building owners a variety of security options through their Sustainable Roofing & Waterproofing Alliance Roof Monitoring and Warranty Incentive Program.**

A project that meets Carlisle's qualifications and is fully monitored (minimum 2–3 days weekly) can qualify for

- **Discounted warranty rate** (the building owner receives a warranty rebate check upon final completion)

or

- **SRA voucher** (Service Rendered Authorization)
 - Interim project inspection
 - Maintenance inspection conducted by an SRA affiliate as part of a preventive maintenance program
 - Warranty transfer: the voucher is valid for a warranty transfer fee
 - Roof alteration inspection before or after PV module installation
 - Roofing materials
 - Warranty rebate
 - Industry events: credits toward lodging or transportation for an educational event

What is the Sustainable Roofing & Waterproofing Alliance?

The Sustainable Roofing & Waterproofing Alliance (SRWA) is a partnership between Carlisle Construction Materials and Building Envelope Consultants that focuses on advancing sustainable practices to ultimately ensure the building owner receives a durable, long-lasting and environmentally sound roofing system.

Sustainable practices can ensure successful installation when implemented throughout the life of the roof positively impacting the roof systems performance and longevity.

Sustainability a “balanced” Integration of sound design principals and green “proven” products to achieve durability, longer service life, energy efficiency and a reduced carbon footprint.

The SRWA Difference

The SRWA consultants receive extensive and continuous training on Carlisle products and systems ranging from roofing, waterproofing, total building envelope and roof garden assemblies. In addition, the SRWA consultant can participate in Carlisle-sponsored events on current roofing trends, design principals, installation techniques and roof forensics.

The commitment to excellence in continuing education, combined with independent professional companies will provide the building owner with optimum value during the initial roof installation and continue to ensure quality as the roof is observed through the eyes of trained professionals.
